

Protective Systems for Loading Docks

Protect your investment and extend the life of your dock seals and shelters with **Blue Giant's Protective Flaps, Double Layer, and Skid Guards.**

These innovative products help protect your dock seals and shelters from damage due to wear and tear and harsh environmental conditions.

Don't delay. Get your protective add-ons and extend the life of your seals with Blue Giant, today.

Protective Flaps / Wear Pleats

These are additional layers of material that are added to the side pads and corners of the head pad to provide extra protection. They have special overlaps that make them more resistant to wear and tear, thus extending the lifespan of the seal. You can choose between 4, 6, 8, or 16-inch sizes.

Double Layer / Wear Face

The Double Layer / Wear Face refers to an extra layer of material that covers the entire contact surface of the side pad or the head pad. This extra layer makes the pad more durable and resistant to damage.

Skid Guard / Scuff Guard

Skid Guard / Scuff Guards are protective features for the inside of the side pads. They are designed to shield the pads from any potential damage caused by freight. These guards can either cover the entire height of the side pads or be specifically 48 inches high, depending on your preference. Their purpose is to prevent scuffs and scratches.
